

Eco Friendly+

A water purification system developed to produce drinking water from water sources with very poor quality!

EcoFriendly+ is an extended version of the EcoFriendly purification system. The EcoFriendly+ has an extra pre-filter that removes larger particles like sand, rust, humus etc., preventing rapid clogging up of the other filters (if the quality of the water source is very poor).

All components are produced by well known international manufacturers and thus the purification statistics are very well documented. Electricity is not required; the system runs on water pressure only. The unit is suitable for private houses, cabins, boats etc. It is also preferable to use in connection with water coolers and hot drink dispensers.

The system removes/reduces:*

- ✓ Bad taste, bad smell and colouring
- ✓ 99.9% humus, particles (including microplastics)
- ✓ 99.9999% bacteria and cysts, like E. coli, shigella, cryptosporidium, giardia
- ✓ 99.9% volatile organic chemicals, nitrates, nitrites, chlorine and chloramine
- ✓ 99.9% heavy metals, including lead and mercury
- ✓ 99.99% virus and disease-causing micro-organisms like rotavirus
- ✓ 99.9% pesticides and herbicides
- ✓ 99.9% pharmaceuticals

Specifications

Capacity

2-4 liters per minute (water pressure dependent). Filter change after approx. 2 500 liters or after 6-12 months of daily use. Easy to install (i.e. in the cabinet under the kitchen sink). NB! water block is recommended. The unit does not tolerate frost.

Measurements

Width: 35,5 cm
Depth: 14 cm
Height: 32 cm
